

Eighth Annual USGN User Conference Gets High Ranks from Attendees for Content Relevancy and Informative Presentations

Attendees of the Eighth Annual USGN User Conference came to Tempe, Arizona on November 9 and 10, 2011 to learn about new USGN development tools and share successes with incorporating USGN as a robust and integral part of their construction and site related workflow. Topics ranged from synthesizing practices and tracking costs at a global level to best practices in managing differing end user requirements to using USGN with iPads and smartphones.

The diversity of attendees' experiences with USGN tools made for interesting discussions as participants addressed key components of their website implementations. Presentations included how USGN sites are being employed for cost effective financial processes, key company-wide databases, preliminary site investigations, and invitations to bid based on geographic location and expertise. Effective integration with third party software such as accounting systems and mapping tools was also addressed at the conference.

USGN provided an overview of software releases and enhancements over the past year plus workshops on how to use new capabilities to augment existing sites.

“The wealth of information combined with professional connection opportunities at the USGN User Conference is unmatched. It was terrific to meet with attendees and hear how they have adapted the USGN flexible toolset to effectively manage their business processes,” said Steve Jackson, Vice President of Real Estate and Construction for Anna's Linen's.

ABOUT USGN, USGN is a privately held company headquartered in Phoenix, Arizona, and provides a secure and easily customizable web-based software management solution for multi-unit construction, real estate development, and ongoing facilities management. USGN's customers include some of the world's largest retailers, restaurants, banks, commercial real estate developers, and service providers, and is considered a world-class leader in both program and project management. USGN provides business solutions and an easy-to-use tool set to accelerate project delivery, oversight, and communications.
